

Wastewater Utility Green Power Report

October 2009

Electricity Generated : 59, 070 kWh (kilowatt hours)

This amount of electricity would have cost \$3,544 if it had been purchased from Duke Energy.

Producing this electricity on-site prevented the emission of approximately 42 metric tons of carbon dioxide.

This amount of carbon emissions is about that of 7 average cars for a **year**.

Over 20 tons of food waste from Purdue University were processed in our digesters this month.

The City of West Lafayette's Wastewater Utility has pledged to generate at least 6% of its electricity on-site as Indiana's first wastewater plant to become an EPA Green Power Partner.
